# Symetria Pay-per-Use Videoconferences

## In-house videoconference in ASP format

The Symetria Pay-per-Use model is a videoconference concept aimed at facilitating the first steps into the videoconference world for SME as well as large companies.

Geographically distributed localities and conference rooms can easily be linked with each other using the HDX videoconference systems developed by Polycom. Their costs are based on use and a proportion of fixed expenses, which means that high investment expenditure and complicated integration into the IT infrastructure are eliminated.

## Your advantages

- Affordable all-included solution
- No high investment expenditure
- No complicated integration into IT infrastructure
- Everything from one source (videoconference system, peripheral devices such as plasma screen, audio system, network connection, training, support and multi-point conference link-ups with several participants)
- Monthly costs depend on actual use
- Videoconferences in TV or HD quality
- Contractual termination possible after 12 months
